# Automotive Electronics

Under the requirements of the global carbon-neutral trend, most countries have set a time-table for the withdrawal of fossil fuel vehicles from the market, and new energy vehicles will inevitably become the first choice in the future. New energy vehicles will require much more electronic components used in traditional vehicles, with the vigorous development of the new energy vehicle market, the global supply chain of automotive electronic components is under high pressure. In the past few years, Interine has focused on distribution of automotive electronic components, with the support of our stable global supply networks and unparalleled sourcing capability, we helped hundreds of automotive (or peripheral devices) manufacturer customers keeping their production line running.

## Sourcing expert for automotive customers

## Application example of HTC product in automotive industry

## QUALITY CONTROL

### Procedures

The tireless quality control, process management and meticulous attention to details are the absolute core of our business. Our systematic detection process ensures the components fully meet customer standards. The accurate compliance with the set process enables us to achieve high quality control standards all the time.

### Equipment

- Our in-house laboratory is equipped with the most advanced testing equipment and material identification equipment to meet our customers' stringent standards.
- The lab was set up with help and guidance from Foxconn.
